Latest Exam Guide & Learning Materials

Exam : **BAS-002**

Title : IBM Algo Financial Modeler
Developer Fundamentals

Vendors : IBM

Version : V12.35

NO.1 What is the top (yellow) layer of a model called?

- A. Reserving Layer
- B. Data Layer
- C. Assets Layer
- D. Realistic Layer

Answer: B

NO.2 A colleague asks you to customize an Excel worksheet to read in values from an Algo Financial Modeler workspace. In each cell you need to return a value from output produced by AFM.

Which function would you use?

- A. AFMWorkspaceInfo
- B. AEMModelInfo
- C. AEMOutput
- D. AEMVariableInfo

Answer: C

NO.3 What is the role of modules in AEM?

- A. Modules are components used to specify all data variables that are being passed in from an external source.
- B. Modules are sets of variables and events for carrying out calculations in Algo Financial Modeler.
- C. Modules provide a diagrammatic view of a company structure that can be visualized within Algo Financial modeler.
- D. Modules containing all the components needed to complete a set of calculations in Algo Financial Modeler are combined.

Answer: B

NO.4 What are two principles upon which the Standard Code is based? (Choose two.)

- A. The code focuses on calculation efficiency over clarity.
- B. The code does not require any checking to ensure that it gives the correct results.
- C. Overtime, additional functionality will be included, building a growing library of content.
- D. The code is not designed to be used as a black box, but always to be modified to suit specific circumstances.

Answer: C,D

NO.5 A colleague tells you that it is possible to pass results directly from one model in Algo Financial Modeler to another. Which file type would you reference to do this?

- A. wva
- B. wvu
- C. wvr
- D. wvz

Answer: C

NO.6 Other than for a product, what would be another purpose for using the BB Matrix

spreadsheet?

- A. A process
- B. An ESG file
- C. An external assumption file
- D. A model

Answer: A

NO.7 In a model, to what would you attach an assumption set?

- A. A data view
- B. A module
- C. A layer
- D. A projection process

Answer: C

NO.8 After setting a model to run, at which three points of this process would a runtime error likely occur? (Choose three.)

- A. When the data is being processed from the source.
- B. When the code is being generated.
- C. When the records are being processed.
- D. When the code is being linked.
- E. When the results are being written.

Answer: A,C,E
